Remittance Impact on Nepal's GDP: Spotlight on Outliers

Outlier Analysis via Box Plot

GDP growth over the years with three significant dips

HIGHLIGHTS:

- The scatter plot illustrates the overall trend between remittances and GDP growth, with notable outlier years marked in red where GDP growth significantly diverges from the trend.
- The box plot offers an overview of the GDP growth rate distribution, confirming the outliers identified in the scatter plot.
- The line chart outlines the trajectory of Nepal's GDP growth, with significant dips highlighted in red that correspond to the outlier years identified in the other charts.

Together, these charts highlight specific years where remittance levels and GDP growth significantly deviate from the trend. The line chart further details these variances, showing the actual GDP growth and indicating the outlier years, which correspond to the most notable peaks and troughs. This combined chart analysis points to a possible correlation between remittance inflows and major shifts in Nepal's GDP growth over time.
